Experience

Freelance Software Development, EU & USA

Nov 2025 – Today

Custom Application Design and Development

- Support systems & tools for e-shop management (**Cloudflare, TypeScript/JavaScript, Python**).
- Designed & developed a sports betting scrapping and analysis system, which runs continuously and provides betting insights (**Python** microservices architecture with **Docker** images in a **k8s cluster** in **AWS EKS**, **FastAPI** backend, **web-components** UI).
- Worked on several web scrapping tools for financial or commercial data (**TypeScript, Python**).

Full Stack Web Development

- Designed and developed a custom, minimal e-shop framework (deployed in Cloudflare workers, **React Router** backend, **React** UI, data stored in **D1/SQLite** database and **R2** object storage).
- Built a tiny CMS for restaurant menus (**web-components** web app, **AWS Lambda** API, deployment through **CloudFormation**, monitoring through **CloudWatch**).
- Created and/or reworked company & personal websites (**AWS/Cloudflare, React/Angular/Vue/plain HTML/CSS3/JavaScript**).

AI Companion Apps

- Built a niche AI companion that automated buying and selling of NFTs, for treasure.lol (deployed in **Cloudflare workers** with **wrangler**, **React** UI, **React Router** backend, interaction with blockchain through **Web3.js**).
- Supported various (existing) AI powered apps for treasure.lol.

Backend Software Engineer, ITSAUR, Thessaloniki, Greece

Oct 2024 – Oct 2025

Worked on development, extension, and improvement of an airport warehouse management automation system (for [Lodige industries](https://lodigeindustries.com)), operating as an organisation & automation tool for warehouse worker and provided connectivity with external system (global airport management & logistic companies).

- Backend processing and automation in **Java (Spring Boot)** microservices orchestrated through **Docker Swarm**, communicating with **Kafka** and/or web requests as needed.
- DevOps in **Bash, Java**, and **Jenkins**, system deployed in dedicated, local server in each warehouse.

Software & Cloud Engineer, Polar Moment, Basingstoke, UK

Sep 2019 – Sep 2024

Worked on various projects, initially as a member of the team, later as a team leader and solutions architect. Was an employee between Sep 2019 and Sep 2023, and then, till Sep 2024, a contractor/consultant.

- Android app for automated payments on electric car [PAX terminals](https://paxterminals.com) for [Instavolt](https://instavolt.com) (**Java** on PAX's custom Android OS).

- Android service to connect vending machines with [PAX's payment](#) terminal for [Planet Payment](#) (**Java** on PAX's custom Android OS).
- Backend system and accompanying support internal tools for [Pivotal](#) with the purpose of transitioning from manual operations to a fully automated setup. Personally lead the technical solution, coordinating directly with the customer, and then the development with a small team as-needed (full infrastructure on **AWS**, **Java** microservices for data processing and automation, **express.js** web API, **Angular** UI).
- Bridge merchants' shops and banks/payment processors for [Deko](#) (**AWS** deployment with **Terraform**, **Java** microservices, communication through **Kafka**).
- Live streaming and subtitles monitoring tool for [BBC](#) (**C++** monitoring app, **Python** for notifications, deployed on on-premises Windows server).
- EMV contactless payment applications on [IDTech IP330 POS](#) (**C/C++**).
- Cashless, contactless payment solution for [Game Payment](#). Took part in the deployment of the user facing app and infrastructure and personally built the internal tool available to the engineers working with these solutions (infrastructure on **AWS** through **CloudFormation**, **Vue** on **Apache Cordova** android app, **Express.js** API on **AWS Lambda**, **RDS MySQL** & **DynamoDB** databases, **CloudWatch** monitoring).

Junior Backend Developer, Bio-Morphis, London, UK

Dec 2018 – Sep 2019

Worked on an alternative, custom cloud storage solution (**Java** backend, **C++** native monitoring application, online UI in plain **HTML/CSS/JavaScript**).

Skills

Software Engineering	JavaScript, TypeScript, Java, Python, C++, Go
Web Development:	
Backend	Java Spring/Spring Boot, Express.js, React Router, Go, FastAPI, Supabase
Web Development:	
Frontend	HTML5/CSS3, Web Components, Vite, React, Angular, Vue
Mobile Development	Android (Java), React Native
Scientific Programming	Wolfram Mathematica, C, C++, Python, Fortran
Blockchain/Web3	Solidity, Ethers.js/Web3.js
AI/Machine Learning	LLM Integration (OpenAI, Claude APIs), PyTorch, TensorFlow, RAG Applications
Dev-Ops	AWS, Cloudflare, Jenkins, GitHub Action, Docker, Kubernetes, Power Automate, Bash
Server Management	Windows Server 2016, Tomcat, Wildfly
Win App Development	Electron, WinForms
Databases	SQL (MySQL, PostgreSQL, SQLite), NoSQL (DynamoDB, Mongo), GraphQL
Project Management	Jira, GitHub Projects, Notion
Source Control	Agile Scrum, Domain-Driven Development git

Education

Physics, BSc
Aristotle University of Thessaloniki

Computational Physics, MSc
Aristotle University of Thessaloniki
